

Data607_Assignment2

Andrew Carson

September 7, 2016

First, load the RMySQL library.

```
library('RMySQL')
```

Then connect to the MySQL database (Note: password has been changed to “password”) and change to the “movierating” database.

```
mydb <- dbConnect(MySQL(), user='root', password='password', host='localhost')
dbSendQuery(mydb, "USE movierating")
```

Then pull in the movierating table results into a dataframe and view results.

```
df<-dbFetch(dbSendQuery(mydb, "SELECT * FROM movierating;"))
```

```
df
```

Finally, disconnect the MySQL connection and clean up.

```
dbDisconnect(mydb)
mydb<-NA
```
